Operation Zugzwang — BLUEFOR Order of Battle

NDF and PFA forces, RFF pools, and visible REDFOR forces

Counter states: Ready · Degraded (−1 when used) · Destroyed (removed).

Visible counters start on the central map, and REDFOR can see them. **Hidden** counters stay on this sheet until you use them or REDFOR finds them.

Your force is smaller and lower-end than REDFOR's. The NDF bought its U.S.-type equipment from Cosmopolis under the old treaty, so **Cosmopolis knows your systems well**. Asotin-supplied items are also modeled as U.S. systems (a game convention). Your strength comes from your advantages: **Home Ground** (S-B3), **Asotin's Backing** (S-B4), and **Supportive Population** (S-B5). See Team Packet §3.

1. In place at start: 21 counters

ID	Asset, owner, zone	What it does	Limitations (REDFOR will use these)
B-01	**F-16C/D Fighting Falcon** squadron 1 (~12) · NDF · Z11 Omak City (Capital)	Multirole air defense and strike. Can also lay Quickstrike mines (B-11).	Outclassed by the F-22 and F-35, and by AWACS-supported forces. One main base makes it vulnerable.
B-02	**F-16C/D Fighting Falcon** squadron 2 (~12) · NDF · Z11	Same as B-01	Same
B-03	**F-15C Eagle** squadron (~12, older) · NDF · Z12 Interior	Air-superiority interceptor	Aging airframes. Spare parts came from Cosmopolis and are now cut off.
B-04	**Patriot battalion PAT-1** (PAC-2) · NDF ·	Denies the air over the Strait to non-stealthy	Mobile but slow to relocate. Its radar emits when active, which the RC-135 can find.

	Z10 Coast (covers the Narrows)	aircraft. Can engage missiles.	
B-05	**Patriot battalion PAT-2** (PAC-2) · NDF · Z11 Omak City (Capital)	Protects Omak City and the main air base	Same as B-04
B-06	**NASAMS** batteries (×3) plus **Stinger** teams · NDF · any Omak zone	Pop-up threats that ambush low or slow aircraft (A-10, MQ-9, C-130J, helicopters)	Short to medium range
B-07	**AN/FPS-117 early-warning radar** network · NDF · Z10–Z12	Long-range detection and cueing for Patriot and fighters	Fixed sites. Can be jammed (EC-37B) and struck.
B-08	**Harpoon Coastal Defense** battery CB-1 (~75 mi) · NDF · Z10 (west Narrows)	Holds shipping and warships in the Strait at risk	Needs targeting data from radar, drones, or the militia
B-09	**Harpoon Coastal Defense** battery CB-2 · NDF · Z10 (east Narrows)	Same as B-08	Same
B-10	**HIMARS** battalion with **PrSM** (~500 km), Asotin-supplied missiles (Army) · NDF · Z12 Interior	**Can reach Camas.** Strikes bases, ports, and ships at anchor. Shoot-and-scoot.	Limited missiles (2–3 salvos per game). Launches are seen by Cosmopolis missile-warning satellites. Patriot on Camas can intercept.
B-11	**Quickstrike naval mine** stockpile · NDF · Z10	Mines the Narrows. Can be dropped by F-16s or laid by boats.	REDFOR can clear mines, given time. Mining an international strait costs International Opinion.

B-12	**Mark VI patrol boat** flotilla (~8) · NDF · Z10 / Z8	Strait patrol, escort, interception, minelaying	Very vulnerable to A-10s, P-8s, and helicopters once found
B-13	1st Armored Brigade: **M1A1 Abrams, M2 Bradley** (Army) · NDF · Z11	Defends Omak City (the capital)	Vulnerable to air attack in the open
B-14	2nd Armored Brigade: **M1A1, M2** (Army) · NDF · Z10	Defends the coast and Fortune Harbor	Same
B-15	Coastal Defense Brigade: **M777** howitzers, **Javelin** teams (Army) · NDF · Z10	Anti-landing defense	Static
B-16	Drone squadron: **MQ-9A Reaper** (~6) + **Switchblade 600** loitering munitions · NDF + PFA · Z12	ISR for targeting (cues B-08 and B-10). Cheap precision strikes.	Easily shot down by fighters and Patriot
B-17	**C-130H Hercules** airlift detachment · NDF · Z11	Moves troops and supplies inside Omak. Receives airlifted Asotin supplies.	Vulnerable once REDFOR has air superiority
B-18	**PFA maritime militia** (~40 armed civilian boats) · PFA · Z10 / Z8	Harassment, minelaying, swarming, scouting. Blends in with civilian traffic.	Light weapons. Low training. Political cost if civilians are hit.
B-19	**PFA militia brigades** (×3, ~15,000 fighters, with M4s, Javelins, and Stingers from	Urban and rural defense. Makes ground incursions very costly (S-B3). Internal security.	Poor discipline. Abuses create backlash.

	NDF depots) · PFA · Z10–Z12		
B-20	**PFA Information Directorate** (state media and social media) · PFA · Z11	Propaganda. Exploits the meddling scandal (moves International Opinion and Domestic Will).	Credibility drops if caught lying
B-21	**PFA "hacktivist" cyber cell** · PFA	Nuisance attacks, leaks, disruption of Camas and Cosmopolis civilian networks	Low sophistication. Attribution invites escalation.

Your hidden assets. REDFOR's intelligence doesn't have a full picture of B-06, B-09, B-10, B-11, or B-21. A hidden asset goes on the map once you use it, so think about *when* to reveal each one. **Tell your logger during Phase I which zones your three NASAMS batteries (B-06) are in.** A secret COA (Rules Handbook §2.7) is one way to turn a hidden asset into a trap.

NDF or PFA? Note each asset's owner. A COA that needs **both** NDF and PFA forces takes −1 for *A House Divided* (S-B1) until you fix it.

2. RFF pool: national mobilization

ID	Asset	Arrives	Approval
B-30	NDF reserve mobilization: 2 infantry brigades	N+1	Routine. Costs Omak economically: the white cell may move Regime Stability −1 if you repeat it.
B-31	PFA volunteer surge (militia +1 brigade)	N+1	Routine, thanks to the supportive population. Can worsen NDF–PFA friction (white cell judgment).
B-32	Requisitioned civilian shipping and ferries	N+1	Logistics, decoys, minelaying platforms

3. RFF pool: Asotin support (S-B4)

ID	Asset	Arrives	Approval
B-40	**Arms shipment**: Stinger, Javelin, Harpoon reloads, PAC-2 interceptors, F-16 spare parts	N+2	**Routine.** Arrives via the West Approach or by air. REDFOR can try to interdict it with a COA.
B-41	**Intel sharing**: satellite imagery and signals intelligence	N+1	**Routine.** Your RFIs about Camas and naval movements get fuller answers.
B-42	**Patriot PAC-3 battery with Asotin "volunteer" crews**	N+3	Only if International Opinion ≤ −1 **or** REDFOR has struck an Asotin shipment. An escalation: Cosmopolis Domestic Will reacts.
B-43	**Asotin "volunteer" F-16 Block 70 squadron**	N+3	Only if International Opinion ≤ −2. A major escalation that may trigger a Cosmopolis–Asotin crisis.

Arriving forces do nothing on the turn they arrive. You can also make free-text RFFs for something not on these lists. The white cell decides.

4. Enemy forces you can see

These are REDFOR's **visible** counters. Their limitations are your Cons. REDFOR may also have hidden assets that aren't listed here. Your Intelligence Products may hint at them.

On Camas (Z6) unless noted

ID	Asset	What it does	Limitations
R-01	**F-35A Lightning II** squadron (~12)	Stealth multirole. Penetrates air defenses, precision strike, sensor fusion.	Limited internal weapons load. Needs tankers at 250 mi. High maintenance demand.
R-02	**F-22A Raptor** squadron (~12)	The premier air-superiority fighter	Small air-to-ground load. Low numbers mean each loss hurts.
R-03	**F-15E Strike Eagle** squadron (~12)	Heavy payload, long-range strike, air-to-air capable	Not stealthy, so vulnerable to intact Patriot and short-range SAMs
R-04	**A-10C Thunderbolt II** squadron (~12)	Close air support, very effective against small boats	Slow and low. Very vulnerable to SAMs and fighters until the air threat is suppressed.
R-05	**KC-46A Pegasus** tanker detachment	Air refueling for every other aircraft	Unarmed, a high-value target. Losing it grounds the strike plan.
R-06	**E-3G Sentry (AWACS)**	Airborne radar picture and battle management	A high-value target. Must stay back from SAM and fighter threats.
R-07	**RC-135V/W Rivet Joint**	Signals intelligence: locates radars and communications	Must stand off. High-value target.

R-08	**RQ-4B Global Hawk**	High-altitude wide-area imagery	Unarmed. Can be shot down by Patriot. Weather limits its imagery.
R-09	**MQ-9A Reaper** detachment	Long-endurance ISR, light strike	Slow. Easily shot down by SAMs or fighters.
R-10	**EC-37B Compass Call**	Electronic attack: jams communications and radar networks	Effect is temporary and local. Must stay within range.
R-11	**C-130J Super Hercules** detachment	Intra-theater airlift, short and rough airfields	Vulnerable near defended areas
R-12	**HH-60W Jolly Green II + HC-130J** rescue package	Combat search and rescue of downed aircrew	Vulnerable. Needs escort and air superiority.
R-13	**Patriot** air and missile defense battery (Army)	Defends Camas against aircraft, cruise missiles, and ballistic missiles	Limited interceptors. A salvo can exhaust it. One battery covers one area.
R-14	**P-8A Poseidon** maritime patrol (Navy)	Maritime surveillance, tracks boats and minelayers, anti-ship strike	Vulnerable to SAMs near the Omak coast
R-15	**Destroyer surface action group**: 2–3 Arleigh Burke-class ships (Navy) · **Z9 East Approach**	Air defense at sea, escorting shipping, Tomahawk land attack	Vulnerable in the Narrows to mines, patrol boats, and coastal anti-ship missiles

At home in Cosmopolis (off-map box Z1)

ID	Asset	What it does	Limitations

R-16	**B-52H Stratofortress** with JASSM-ER and LRASM	Flies from home with tanker support. Launches standoff missiles from outside SAM range.	A home-based strike sortie takes the whole turn. Not stealthy.
R-17	**B-1B Lancer** with JASSM-ER and LRASM	Fast heavy bomber with a large standoff-missile load. Good against shipping.	Whole-turn sortie from home. Not stealthy.
R-19	**C-17A Globemaster III** airlift	Strategic airlift from home	Needs secure airfields at both ends
R-20	**Space Force support**: GPS, SATCOM, missile warning	Precision navigation, long-haul communications, early warning of missile launches	GPS and SATCOM can be jammed. Asotin has counterspace capability.
