Operation Zugzwang — BLUEFOR Team Packet

Omak: objectives, intelligence estimate, advantages and constraints, planning guide

Fictional training scenario. All military systems are real U.S. systems, described with unclassified, approximate capabilities.

Your BLUEFOR read-ahead is four documents: the **Commander's Read-Ahead** (your orders), this **Team Packet**, the **BLUEFOR Order of Battle** (your forces, your RFF pools, and the enemy forces you can see), and the **BLUEFOR Intelligence Products**. You also have the common documents: the Player Rules Handbook, the Scenario Brief, and the Player Forms.

1. Secret objectives

Keep these from REDFOR. The white cell scores them after Turn 7.

#	Objective	Achieved	Partial	Not achieved
B1	**"Survive!"**	The Indigo/PFA government holds Omak City (the capital) and Regime Stability ≥ 2	The government survives but Stability ≤ 1, or it is forced into a power-sharing deal	The government has fallen
B2	**"Keep the Strait ours!"**	Omak controls its southern shore, no Cosmopolis ground forces are on Omak soil, **and** any Strait arrangement recognizes Omak's sovereignty	Cosmopolis holds only a limited coastal foothold, **or** the Strait reopens on Cosmopolis's terms without Omak's agreement	Cosmopolis controls Omak's Strait coast

B3	**"Win the world's sympathy!"** *(long-term)*	International Opinion ≤ −2, **or** the government is formally recognized by at least two states besides Asotin	International Opinion −1 or 0	International Opinion ≥ +1

Things to think about

- No single COA will settle an objective. Plan a sequence.
- B1 runs through **Regime Stability**. Protect it from strikes, unrest, and NDF–PFA friction.
- B2 doesn't require the Strait to stay Closed. It requires that *Omak's sovereignty* is recognized in any arrangement. A deal can achieve it.
- B3 runs through **International Opinion**, which starts at −1. Every civilian you harm, every neutral ship you hit, and every lie you're caught in pushes it the wrong way.

2. Intelligence estimate

This is your intelligence services' assessment of what Omak believes. It may be incomplete or wrong. The Intelligence Products are the raw reporting behind it, and they don't all agree. Use RFIs and ISR COAs to confirm. All visible REDFOR counters are on the central map.

- **Cosmopolis bombers:** Cosmopolis can strike from home with B-52s and B-1s.
- **Cosmopolis special forces and cyber:** unknown.
- **Ground invasion:** Cosmopolis is likely planning a ground invasion within days.
- **Latah:** is Cosmopolis's ally and will host its bombers.
- **Asotin:** has promised arms, intel, and "whatever is needed."
- **Sapphire loyalists:** a few disloyal officers may remain in the NDF.

Good first RFIs might test the claims above: whether Cosmopolis ground forces or amphibious ships are actually moving, what Latah has really agreed to, and what Asotin will actually send. Remember that your RFIs about REDFOR activity *inside Omak* get full answers (S-B5).

3. Your advantages and constraints at a glance

Your starting conditions (full text in Scenario Brief §6)

ID	Name	What it means for you
S-B1	A House Divided	−1 when NDF and PFA forces must work together. Fix: a "unified command" COA, or Regime Stability 5.
S-B2	Sapphire Loyalists	REDFOR may try defections or sabotage (at −1). A successful counterintelligence COA ends the threat for good.
S-B3	**Home Ground**	**+1** to your defensive COAs in Z10–Z12: defending, dispersing, hiding, repairing, ambushing
S-B4	**Asotin's Backing**	Asotin arms (B-40) and intel (B-41) are routinely approved
S-B5	**Supportive Population**	REDFOR takes −1 on COAs relying on Omak civilians, and your RFIs about REDFOR inside Omak get full answers. Lost if Regime Stability falls to 2 or lower.

REDFOR weaknesses you can exploit

ID	Name	What it means for you
S-R1	The 8,000-Mile Tail	Camas runs short after 3 turns of high tempo. Long reinforcement times.
S-R2	Single Hub	Everything forward is on Camas. One successful strike there can Degrade every counter on the island.
S-R3	Latah Hesitates	Latah allows logistics only, not combat sorties (as far as the public record shows)
S-R4	Legitimacy Deficit	REDFOR takes −1 on COAs relying on third parties while Opinion ≤ −1

Your rules of engagement (Scenario Brief §8): the NDF won't fire on Omak civilians or join political repression (internal security is PFA-only) · striking civilian targets on Camas or in

Latah moves Opinion +1 toward Cosmopolis · striking Latah at all brings Latah into the war · attacking neutral shipping moves Opinion +1 toward Cosmopolis.

Tracks that matter most to you

Track	Starts	Watch for
Omak Regime Stability	4	**5** removes *A House Divided*. **≤ 2** loses S-B5. **0** means the government collapses. B1 needs **≥ 2**.
International Opinion	−1	B3 needs **≤ −2**. **−3** makes Asotin escalate. **+3** gives REDFOR Latah basing.
Cosmopolis Domestic Will	3	**0** forces a Cosmopolis ceasefire. A Closed Strait costs it −1 every turn.
Strait Traffic	Restricted	Closing it hurts Cosmopolis, but it hurts Omak's income too

4. Phase I & Phase III Planning

Things to think about

1. Which objective is most at risk on Turn 1, and how do we protect it?
2. How do we survive REDFOR's first strikes? What do we disperse, hide, or move?
3. When, if ever, do we reveal our long-range strike option, and against what?
4. How do we fix the NDF–PFA seam (S-B1), and is it worth a COA?
5. Which intelligence products do we believe, which do we doubt, and which do we need to confirm before we act on them?
6. What are our **non-kinetic** COAs? Some ideas to test: an information campaign built on the meddling scandal (B3), a diplomatic push for recognition by other states (B3), counterintelligence against Sapphire loyalists (S-B2), an offer of talks that recognizes Omak's sovereignty over the Strait (B2), or outreach to Tekoa.
7. What do we ask Asotin for, and when? What would push Asotin to send more?
