REDFOR Intelligence Products: Read Me First

Rules for using them

Nothing here is an established fact. A Pro or Con that relies on a report counts only as far as the report is believable. Confirm what matters with an RFI or an ISR COA before you bet a turn on it (Rules Handbook §2.6).

Ratings. CNDF reports carry an analyst's rating in the NATO "Admiralty" format: a letter for the **source** and a number for the **information**. The rating is an analyst's judgment, not the truth. Analysts can be wrong too.

Source reliability		Information credibility	
A	Completely reliable	**1**	Confirmed by other sources
B	Usually reliable	**2**	Probably true
C	Fairly reliable	**3**	Possibly true
D	Not usually reliable	**4**	Doubtful
E	Unreliable	**5**	Improbable
F	Reliability cannot be judged	**6**	Truth cannot be judged

Dates are relative to D-Day. Phase I takes place at D−3. Times are local.

How to read the formats

Intelligence Information Reports (IIRs) pass on what a human source said. They are raw reporting, which is why each one says it is "not finally evaluated intelligence." Read the source description and the comments before the text.

Assessments and comments use standard estimative words. They describe the analyst's judgment of likelihood, not certainty.

Word	Roughly means
almost certainly	95% or more
very likely	80–95%
likely, probably	55–80%
roughly even chance	45–55%
unlikely, probably not	20–45%
very unlikely	5–20%
almost no chance	under 5%

Confidence (low, moderate, high) is separate. It describes how good the evidence is, not how likely the event is.

Open sources (news, social media, foreign broadcasts) are reproduced as collected. Nobody has checked them.
